

# Photo Validation Notice For Locker Service

## **How is Photo Validation used at Universal Beijing Resort?**

Universal Beijing Resort uses photo validation technology for locker service – making it faster and more seamless for you to experience the service.

We scan your facial image with your permission when you activate a locker and rescan your facial image for locker access. This information helps facilitate access and prevent fraud.

## **What information is collected as part of Photo Validation?**

Photo validation technology is a system capable of verifying a person from a digital image. It compares selected facial features to an existing image. It is similar to a person checking a photo ID, but uses a faster and more automated system. The photo validation system collects a digital image. From that image, the software builds a template. A template is a set of data points based on facial features. Both the digital image and templates are securely stored by Universal Beijing Resort on premise for up to 48 hours upon the activation of your locker

(<https://www.universalbeijingresort.com/en/content/protection-center#s07>).

## **Are guests required to use photo validation?**

You may choose to opt out of the Photo Validation process by clicking the key icon on the screen, or contacting our Team Member for assistance. You will be instructed to use the PIN number solution.

For more information, please refer to *Universal Beijing Resort Personal Information Protection Policy* available at <https://www.universalbeijingresort.com/en/content/privacy-center>
